EASY INSTALLATION

Thanks to the edging's design and the metallic accessories included with it, it's very stable and is fitted without the need to excavate, which facilitates the work of marking out spaces and separating different materials, therefore saving installation costs.

INVISIBLE LINK BETWEEN PIECES

The connection between pieces is made with a metallic piece that remains hidden, allowing to a clean, perfect finish.

FLEXIBLE

Each piece of Maxiflex comes out perfectly straight. If you want to make curves, you just need to cut as many joints between tabs as necessary to free the edging and be able to shape it.
